

Sharon Harrison

Learning Experience Designer / Content Creator

Designing clear, practical content that supports real-world work

Thank you for taking the time to view samples of my work.

Learning transforms when it feels real, relevant, and human. I design experiences where participants see themselves in the scenarios, make real choices, and leave with skills they can confidently use.

I design learning experiences that build confidence, spark curiosity, and help people feel capable in moments that matter. I turn technical frameworks into memorable stories, building accessible solutions for every learner, and collaborating with stakeholders in transparent, energizing ways.

This deck includes samples created for healthcare, call center, and corporate audiences. Click the images to explore interactive demos.

What excites me most is creating learning that sparks insight and lasting change. I bring empathy, clarity, and innovation to every role, helping organizations meet standards while inspiring growth. In today's fast-paced world of AI and evolving design tools, I'm continually sharpening my skills to deliver learning that is impactful—and deeply human.

Questions or feedback? Let's connect.

Audience: Designers and SMEs

Tools Used: Canva, Articulate Storyline, SnagIt, Copilot AI

The Problem

SMEs are critical partners in instructional design, but many are unfamiliar with the ADDIE framework. When introduced through specialized design language, the model feels abstract and hard to understand, leading to misaligned expectations and slowed collaboration. The challenge was to create a quick, engaging way to explain ADDIE that resonates with SMEs, simplifies the process, and highlights their role.

The Solution

To address this challenge, the module compares the ADDIE stages to the lifecycle of a butterfly. This metaphor transforms a technical framework into a vivid, memorable story. Each stage—egg, caterpillar, chrysalis, emergent, butterfly—maps directly to Analyze, Design, Develop, Implement, and Evaluate. The visuals and narrative simplify the process for SMEs, helping them see their role in each phase as part of a natural transformation. Grounding ADDIE in a familiar metaphor increases SME engagement, reduces confusion, and fosters smoother collaboration across the project lifecycle.

The Impact

Designers present the butterfly metaphor during initial meetings with SMEs, creating an immediate shared understanding of the ADDIE framework. SMEs gain clarity about their role in each stage, and collaboration cycles become more efficient. The metaphor reduces resistance to iteration, as SMEs recognize the importance of each phase in the transformation. This approach aligns expectations, accelerates collaboration, and empowers SMEs to contribute confidently to instructional design projects. For designers, the framework serves as a reusable onboarding tool that streamlines SME engagement across projects.

Microlearning Module

Select the image to view the project

Audience: Clinical Nurses

Tools Used: Articulate Storyline, SnagIt, Copilot AI

The Problem

Compliance audits revealed that some nurses were missing critical steps in the handwashing protocol and underestimating the time required to wash hands thoroughly. This gap posed risks to infection control and patient safety. Traditional training materials were text-heavy and failed to emphasize both the sequence of steps and the importance of duration, leading to inconsistent practice across staff.

The Solution

This interactive microlearning module breaks the handwashing protocol into clear, visualized steps. The module includes:

- Step-by-step images showing correct technique (e.g., palm-to-palm, between fingers, under nails).
- Built-in timers demonstrating the recommended duration for thorough handwashing.
- A thought question for each step along with an explanation.
- An exercise allowing nurses to practice the handwashing technique.

By combining visual storytelling with interactive elements, the module transforms a routine compliance task into an engaging, memorable learning experience.

The Impact

This microlearning module increases compliance, strengthens confidence in proper technique, and fosters a culture of patient safety. Nurses engage with clear, step-by-step guidance and timed exercises that make handwashing both memorable and practical, while organizations benefit from greater consistency, reduced errors, and smoother audit outcomes.

Embedded Video With Checkpoint

Select the image to view the project

Audience: Clinical Nurses making home visits

Tools Used: Canva, Articulate Storyline, SnagIt, Copilot AI

The Problem

Falls among older adults are a leading cause of injury and hospitalization, and compliance training often fails to connect protocols to real-world practice. New nurses reported difficulty applying fall-prevention guidelines during home visits, where unpredictable environments and patient behaviors increase risk. A gap existed between knowing the checklist of fall-prevention steps and recognizing how to respond when a fall actually occurs. This module is part of a review series for nurses making in-home visits.

The Solution

This scenario-based review module places the learner in the role of a nurse making a home visit. In the scenario, the patient experiences a fall, and the learner must decide how to respond. The module includes branching decisions that allow the learner to choose immediate actions (e.g., assess safety, call for help, document the incident). By situating fall-prevention and response protocols in a realistic home-visit setting, the module translates compliance rules into practical decision-making that nurses can confidently apply.

The Impact

Nurses report that the scenario helps them visualize how fall-prevention and response protocols apply in unpredictable home environments. The branching design encourages critical thinking and reinforces the importance of immediate, compliant action. Compliance audits show improved consistency in documentation and response steps after training.

Interactive Game-based Learning Module

Select the image to view the project

Audience: Call Center Associates

Tools Used: Adobe Illustrator, Articulate Storyline, SnagIt, Copilot AI

The Problem

Call center staff needed reinforcement of core skills, including active listening, empathy, clear communication, and adherence to scripts. Traditional training methods were text-heavy and often disengaging, leading to low retention and difficulty applying skills in real-time customer interactions. The challenge was to create a review activity that was both engaging and effective at reinforcing key behaviors without defaulting to text-heavy, document-driven training.

The Solution

This interactive match game pairs tiles and cards representing core call center skills with corresponding examples. When a correct match is made, the game immediately prompts a follow-up question related to that skill. Learners must answer the question correctly to proceed, reinforcing both recognition and application. Each answer triggers immediate feedback, explaining why the choice is right or wrong, which strengthens understanding and encourages mastery. This layered design transforms a simple matching activity into a deeper learning experience that combines gamification, practice, and feedback.

The Impact

Learners report that the match game made reviewing core call center skills more engaging and interactive. By requiring them to not only match tiles correctly but also answer a follow-up question before progressing, the activity reinforces both recognition and application of skills. Immediate feedback for each answer helps clarify misunderstandings in real time, building confidence and mastery. Supervisors and quality specialists observe stronger retention of compliance requirements and improved performance when monitoring live calls.

Interactive Simulation

Select the image to view the project

Audience: Case Managers

Tools Used: Adobe Illustrator, Articulate Storyline, SnagIt, Copilot AI

The Problem

Staff needed to use the ASPEN application for compliance and reporting, but many struggled with navigation and completing tasks correctly. Traditional training relied on static job aids or classroom demonstrations, which didn't replicate the live environment. As a result, learners often felt unprepared when working in the actual system, leading to errors, inefficiency, and frustration.

The Solution

This simulation module replicates the ASPEN application interface, allowing learners to practice in a safe, guided environment. The simulation includes:

- Realistic replication of the live system so learners experience exactly what they will encounter.
- Step-by-step captions that guide navigation and explain functions.
- Hands-on practice where learners click through workflows without risk to real data.

This design gives learners the feel of working in ASPEN while providing structured guidance and immediate reinforcement. This module is part of a series, reflecting the many layers of the application.

The Impact

Learners report greater confidence in navigating ASPEN after completing the simulation. Error rates decrease as staff become familiar with the system's layout and workflows before using it live. Captioned guidance reduces confusion and standardizes training across teams. This module also serves as a reference tool during live system use.

Reference Guides

Select the images to view the projects

Audience: Internal Design Teams and Independent Department Groups
Tools Used: Macro Design Word Templates

The Problem

Smaller departments struggled with the company’s massive knowledge base:

- Content was too broad and generic, or too dense, making it hard to find relevant procedures.
- Updates were slow and centralized, leaving frontline teams with outdated instructions.
- Staff felt disengaged because they had little ownership over the documentation.
- Saving items as favorites was causing favorite lists to become too long.

The Solution

To address the need for department-specific procedure guides, these templates streamline both design and adoption. I outline the structural requirements for macro templates, so each department understands what elements are essential. Templates ensure consistency in format, language, and policy requirements. By breaking down complex workflows into learner-friendly steps aligned with accessibility and usability standards, the guides remain concise, relevant, and easy to navigate. This approach not only enhances clarity and compliance but also integrates seamlessly with the company’s broader knowledge base, driving adoption and long-term value.

The Impact

By compiling departmental content into structured templates, I enable teams to update and share procedure guides more efficiently, reducing reliance on the slow, centralized knowledge base. The guides reflect daily workflows, improve clarity, reduce errors, and boost staff confidence with learner-friendly documentation. At the organizational level, this approach strengthens the knowledge ecosystem by bridging local practices with enterprise standards, ensuring alignment without overwhelming users. Some departments also store the guides in local shared drives for easier access while maintaining links to the main knowledge base.

Facilitator Guide

Select the image to view the project

Note: This project is published in Rise 360 review format. It is intended for demonstration only. No comments or feedback are required.

Audience: Trainers in the ACMP Clinical Healthcare

Tools Used: Adobe Illustrator, Rise 360, SnagIt, Copilot AI

The Problem

Trainers often struggle with juggling multiple documents during sessions — a facilitator guide for delivery notes and a learner guide for content. This duplication creates inefficiency, confusion, and extra preparation time. Trainers request a way to condense materials into a single resource that still distinguishes their facilitation notes from learner-facing content while remaining easy to navigate.

The Solution

This dual-purpose guide in Rise 360 merges facilitator and learner content into one interactive module. Key features include:

- Embedded facilitator notes (e.g., Say, Do) followed by learner content.
- Collapsible sections so trainers can access guidance quickly without disrupting the learner's flow.
- Responsive design that supports tablets or laptops during delivery.
- Single-source updates so any compliance or content changes apply automatically to both trainer and learner views.

This approach provides trainers with a streamlined, modern tool that reduces prep time and ensures session consistency.

The Impact

Trainers report that the combined guide simplifies delivery and reduces the need to cross-reference multiple documents. They value having facilitation notes embedded directly in the learner's flow, which makes sessions smoother and more interactive. Preparation time decreases, and training becomes more consistent across facilitators.

Storyboard: Handwashing for Clinical Nurses (Storyline 360)

This storyboard illustrates the instructional flow and interaction design for a clinical handwashing microlearning module.

What This Demonstrates

- Clear, intuitive interaction design using a stopwatch interface
- Nonlinear navigation that supports adult learning principles
- Step-by-step sequencing with clinical imagery
- Embedded thought questions in place of traditional quizzes
- Timed practice simulation to reinforce real-world pacing
- Clean, accessible structure with low cognitive load

Capabilities at a Glance

- Scenario design & branching simulations (e.g., Storyline 360, Camtasia)
- Interactive video & animated storytelling (e.g., Vyond, Rise 360, Canva)
- Gamified learning activities (match games, knowledge checks)
- Accessible design (screen readers, alt text, logical navigation)
- Stakeholder collaboration & SME engagement
- Compliance-aware training for healthcare & corporate audiences

Note: These samples are prototypes. Accessibility features are partially implemented here, but in production, I ensure full compliance.

Thank you for taking the time to review my work. I'd love to explore how these approaches and other designs can support your team's goals and elevate performance. I look forward to connecting.
